Protecting your drinking water

These plans are developed by the Department of Water in consultation with local communities, state and local government and other interested stakeholders. Government bodies such as the Department of Health and water service providers such as the Water Corporation are also consulted.

The Department of Water aims to publish protection plans for all of the 139 drinking water sources through Western Australia. So far more than 80 of these have been published.

The support we receive from local communities, state and local government authorities and other interested stakeholders, for both the preparation and implementation of these protection plans, will greatly assist in ensuring the availability of safe, good quality drinking water now and in the future.

How to obtain a copy of the Quindalup Water Reserve drinking water source protection plan

If you would like to view this protection plan please visit, <http://drinkingwater.water.wa.gov.au/> and then scroll down to the link for drinking water source protection plans and assessments. If you are unable to access the internet, please call the Department of Water to arrange for a copy of the plan to be posted to you.

Where can I get more information?

A range of other publications, such as water quality protection notes, policies and guidelines, are produced by the department’s Water Source Protection staff. To find out if your property is in the area covered by this plan please use the Geographic Data Atlas. A registry of drinking water sources within each of the local government areas also exists. To access these resources please go to <http://drinkingwater.water.wa.gov.au/> and then scroll down and click on the relevant link or contact the department’s Water Source Protection staff on 08 6364 7600.

Feedback

We welcome your comments and suggestions on the issues raised in this brochure and the associated drinking water source protection plan. Ultimately the quality of water provided to consumers will depend on everyone working together.

**Drinking water source protection plans**

The Department of Water protects and manages drinking water catchments and water reserves in Western Australia. This involves developing and implementing policies and plans based on the *Australian drinking water guidelines 6, 2004*. To maintain the quality of these water supplies we must protect and manage not only the catchments and underground water sources, but also the associated storages, treatment plants and distribution systems.

A drinking water source protection plan has been developed for the Quindalup Water Reserve. The risks to the water quality have been identified with the community’s help and management strategies for tackling them have been recommended. The main risks are outlined under Contamination.

**Am I in the Quindalup Water Reserve?**

- **Land use**
  
The main land use in the Quindalup Water Reserve is:
  - drinking water supply.

While it will be possible for all existing, legally-established land uses to continue, there is a need for those involved to adopt management practices designed to protect the quality of this drinking water source. New developments or expansion of existing land uses may only be supported if they conform with the plan’s recommendations.

For more guidance on appropriate land uses refer to the water quality protection note: *Land use compatibility in public drinking water source areas*, produced by the Department of Water. To do this please visit <http://drinkingwater.water.wa.gov.au/> and then scroll down to the link for water quality protection notes. If you are unable to access the internet please call the Department of Water to arrange for a copy of the note to be posted to you.

**Contamination**

Drinking water source protection plans identify sources of potential water contamination. There are negligible water quality risks for the Quindalup Water Reserve due to:

- proper bore construction
- confined nature of the aquifer.

Following careful assessment of all potential contamination risks, recommendations have been made whose implementation will ensure the long-term protection of this vital water supply. The main recommendations include:

- incorporation of the plan into the Shire of Busselton’s town planning scheme to ensure that future land uses in the water reserve are compatible
- putting signs in place to make people aware of the reserve boundaries
- surveillance of the water reserve to continue.
